

SAFETY REQUIREMENTS

Most of SAWS Production and Treatment facilities use or create chemicals that can cause serious illness/injury to the respiratory system and skin. SAWS has several hazard controls in place in order to minimize and prevent exposure from these chemicals. If work will be conducted on SAWS property, or any SAWS facility, the Contractor shall provide their employees, agents, and sub contractors the SAWS “Production and Treatment Chemical Safety Training for Contractors” by logging into www.saws.org/chemical_safety and downloading the training materials. Any questions pertaining to the “Production and Treatment Chemical Safety Training for Contractors” must be addressed to Floramie Welch at 210 233 3744.
