

Commercial

Toilet Retrofit Programs

Install a new high-efficiency toilet and stop flushing money down the drain.

Eliminate those old water guzzling toilets and add savings to your company's water bills.

Your company can save water and money with the San Antonio Water System (SAWS) Commercial Toilet Retrofit Programs. You can choose from one, or any combination, of the following program options designed to significantly reduce your company's water bill and overall water consumption.

OPTION 1: TOILET REBATE

Replace old high water use toilets and/or urinals and receive a rebate on your water bill for \$75 per retrofitted fixture. Please note that rebates will not be provided for fixtures purchased prior to the date that the completed application is received by SAWS. **This rebate option expires December 31, 2007.**

Who qualifies?

SAWS Industrial, Commercial and Institutional (ICI) Water Customers replacing high flow toilets installed prior to 1992.

What steps are involved?

1. Prior to conducting any retrofits, complete the attached application and return it to SAWS.
2. Be prepared to allow a SAWS Representative to conduct a pre-retrofit inspection.
3. Replace your old fixtures with any of the approved models from the "Approved Commercial Fixtures List" (obtain a copy of this list by calling the SAWS Conservation Department at (210) 233-3659 or by visiting the SAWS website at www.saws.org).
4. Submit original receipts and invoices for replacement fixtures to SAWS.
5. Upon completion of all retrofits, be prepared to allow a SAWS Representative to conduct a post-retrofit inspection.
6. Once all retrofits are completed and verified by SAWS, your account will be rebated for \$75 per retrofitted fixture.

OPTION 2: TOILET DISTRIBUTION

Replace old high water use residential and industrial style toilets with new high-efficiency toilets – provided by SAWS absolutely free!

Who qualifies?

SAWS Commercial Water Customers replacing high flow toilets installed prior to 1992.

What types of toilets are available?

Note: All toilets come with seat, wax ring and mounting hardware.

Residential Style Toilets

Residential style toilets are gravity flush, tank type toilets typically found in residential settings.

Residential style toilets are available in round front, elongated and Americans with Disabilities Act (ADA) Compliant models. All residential style toilets are floor mount, floor discharge models.

Industrial Flush Valve Toilets

In an Industrial Flush Valve Toilet, water flows under pressure from the supply piping directly into the fixture.

Because Industrial Flush Valves are directly connected to supply lines, repeat operation is faster than the refilling process in tank-type toilets. The pressurized flush from an Industrial Flush Valve also produces a more powerful, cleansing flush. Industrial Flush Valve Toilets are available in standard height and ADA Compliant models.

ADA and Elongated

Residential and industrial style ADA Compliant toilets will be provided where high flow ADA Compliant toilets previously existed or where a need has been established and properly documented. Residential style elongated toilets will only be provided where required by local plumbing code.

What steps are involved?

1. Identify the type and number of fixtures you are retrofitting.
2. Complete the attached application and return it to SAWS.
3. Be prepared to allow a SAWS Representative to conduct a pre-retrofit inspection.
4. Upon approval by SAWS, you will be authorized to pick up your new fixtures from a SAWS authorized location. SAWS will arrange free delivery for orders of 10 or more toilets.
5. Complete all retrofits within 90 days of delivery, and notify SAWS upon completion.
6. Be prepared to allow a SAWS Representative to conduct a post-retrofit inspection.

NON-PROFIT INSTALLATION

If you are a non-profit organization, you may qualify for a complete retrofit of all high flow toilets in your facility – provided by a SAWS Plumbing Contractor absolutely free!

Who qualifies?

Qualifying non-profit SAWS Water Customer organizations include but are not limited to:

- Local, State and Federal Government Facilities
- Non-Profit Housing
- Non-Profit Medical Institutions
- Public Schools
- State Colleges and Universities

What are the steps involved?

1. Complete the attached application and return it to SAWS.
2. Be prepared to allow a SAWS Representative or Plumbing Contractor to conduct a pre-retrofit inspection.
3. Complete all necessary paperwork and provide proof of non-profit status.
4. Upon approval, SAWS will arrange for installation of new toilets by a SAWS Plumbing Contractor.
5. Applicants are required to attend a pre-project meeting and are required to sign a “Work Authorization Certificate” prior to the start of any work.
6. Once all fixtures are installed, a post-inspection conducted by a SAWS Representative is required.
