**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

I. Summary

The Texas Commission on Environmental Quality (TCEQ) is proposing to renew TPDES Multi Sector General Permit (MSGP) TXR050000, issued August 14, 2016, which authorizes the discharge of stormwater associated with industrial activity. The draft MSGP specifies which facilities must obtain permit coverage, which are eligible for exclusion from permit requirements, which may be automatically authorized, and which may be required to obtain individual permit coverage.

The principal changes to the existing MSGP include:

- A.** Added in Part II.A the North American Industrial Classification System (NAICS) codes for consistency with the United States Environmental Protection Agency's (EPA's) MSGP and to assist the regulated community. Updated a few descriptions of Standard Industrial Classification (SIC) codes to be consistent with the Occupational Health and Safety Administration's (OSHA's) descriptions.
- B.** Clarified in Part II.C that applications must be submitted electronically, unless the applicant requests and obtains a waiver from electronic reporting.
- C.** Changed provisional coverage from seven days to 48 hours for paper applications to be consistent with other water quality general permits.
- D.** Added in Part II.C items required on the Notice of Intent (NOI) and the Notice of Change (NOC) to comply with federal electronic reporting requirements in Title 40 of the Code of Federal Regulations (CFR) Part 127.
- E.** Added in Part II.C. that Delegation of Signatory Authority forms must be submitted electronically using TCEQ's online State of Texas Environmental Electronic Reporting System (STEERS).
- F.** Added in Part III.A.4. that facilities handling pre-production plastic must implement Best Management Practices (BMPs) to eliminate discharges of plastics in stormwater to clarify rules and to ensure water quality protection. Examples of plastic material required to be addressed as pollutants include virgin and recycled plastic resin pellets, powders, flakes, powdered additives, regrind, scrap, waste and recycling material.
- G.** Clarified reporting requirements for numeric effluent limitations in Part III.E.6 and added a paragraph in Part III.C. to distinguish between the two types of numeric effluent limitations required: hazardous metals and discharges subject to federal effluent limitations guidelines. Clarified that results of hazardous metals are kept onsite, unless results exceed limits in the MSGP.
- H.** Added a table in Part III.C. providing an overview of regulated discharges subject to federal categorical guidelines. Moved sampling and reporting requirements for those discharges from Part V to this section.
- I.** Modified tables for numeric effluent limitations based on federal effluent guidelines in Part V to be consistent with EPA's MSGP and to clarify which stormwater sources are subject to monitoring requirements.

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

J. Changed two benchmark values and sampling:

Based on Benchmark Monitoring Reports received from permittees during permit years 2017 through 2019, the following changes were made after data analysis:

1. Sector T, Treatment Works: Lowered the benchmark value for biochemical oxygen demand (BOD) from 20 milligrams per Liter (mg/L) to 15 mg/L.
2. Sector U, Food and Kindred Products Facilities (SIC codes 2074-2079): Lowered total suspended solids from 100 mg/L to 50 mg/L.

K. Revised Parts III and V for consistency to require that rain events are monitored by using an on-site rain gauge, a representative weather station, or subject to TCEQ's approval, an alternative means of compliance.

L. Added requirements to implement BMPs for off-site vehicle tracking of sediments, generation of dust, dewatering of trenches and excavations, and pumping or dewatering of standing water to Sector J, Mineral Mining and Processing Facilities, in Part V to be consistent with TCEQ's Construction General Permit (CGP, TXR150000).

M. Made clarifications to Sector L, Landfills and Land Application Sites, in Part V to be consistent with regulations for solid waste. Added a definition for "Final Cover" and "Intermediate Cover"; replaced "trenches" with "units" and added that the site map also needs to depict inactive solid waste landfill cells or units.

N. Added requirements to Sector Y, Rubber and Miscellaneous Plastic Products, and Miscellaneous Manufacturing Facilities, in Part V to implement BMPs for the control of pollutants at rubber, miscellaneous plastic products, and miscellaneous manufacturing facilities to prevent the discharge of pollutants in stormwater to clarify rules and to ensure water quality protection.

II. Executive Director's Recommendation

The Executive Director has made a preliminary decision that this general permit, if reissued, meets all statutory and regulatory requirements. It is proposed that the general permit be reissued to expire five years from the effective date of August 14, 2021, in accordance with the requirements of 30 Texas Administrative Code (TAC) §205.5(a).

III. Permit Applicability and Coverage

A. Need for a Permit:

The MSGP authorizes the discharge of stormwater associated with industrial activities into surface water in the state. "Stormwater associated with industrial activity" is defined in federal rules at 40 CFR §122.26(b)(14), which TCEQ adopted in state rules at 30 TAC §281.25(a). The draft general permit specifies which facilities may be authorized under the general permit and which must be authorized by an individual permit or alternative general permit.

A facility must have authorization for stormwater discharges if it is defined as an industrial activity by 40 CFR §122.26(b)(14) or designated by the Executive Director. A regulated facility may obtain authorization under the MSGP if coverage is not otherwise prohibited:

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

1. The SIC code that describes the facility (i.e., the primary SIC code) is specifically listed in Section II.A. of the general permit (see Part II, Section A of the draft permit);
2. The facility conducts an activity described by one or more Industrial Activity Codes that are described in the general permit (see Sectors K, L, O, and T in Part II, Section A. of the draft permit, and Part V, Sections K, L, O, and T);
3. Stormwater discharges from the facility are subject to federal categorical effluent limitations at 40 CFR Subchapter N Parts 400-471 (applicable to certain discharges within Sectors A, C, D, E, I, J, O, and S in Part V of the general permit); or
4. The facility has been designated by the Executive Director as requiring coverage under Sector AD.

Regulated industrial activities are grouped into 30 sectors, A through AD, and each sector consists of a group of similar industrial activities. For this reason, the permit is referred to as the "Multi-Sector General Permit," or MSGP. Most sectors of activity are further divided into more specific subsectors through the use of SIC codes; although some sectors include only one SIC code, and four sectors (K, L, O, and T) are defined only by an industrial activity code (HZ, LF, SE, and TW, respectively). In addition, Sector AD is reserved and will be used to provide permit coverage for facilities that are designated in writing by the Executive Director as needing a permit to control pollution related to stormwater discharges, but that are not described by Sectors A-AC.

Military installations and other federal facilities are also regulated under the MSGP if they have a potential to discharge stormwater that is regulated under the MSGP, even though the facility SIC code may not be listed. For example, the SIC code for a military base is 9711; however, permit coverage is required for any military base that conducts a regulated activity. Other public facilities are regulated under the MSGP if the facility is described in the general permit. For example, if a city operates a general warehousing operation, the city would need to determine the SIC code that best describes the actual facility rather than using the SIC code that describes the entire city.

B. No Exposure:

Facilities regulated under the MSGP may be excluded from permit requirements if there is no exposure of industrial materials or activities to precipitation or runoff. To qualify for this conditional exclusion from permit requirements, the operator of the facility must certify that industrial activities and materials are isolated from precipitation and runoff by storm resistant shelter. The certification must be submitted to the TCEQ on a No Exposure Certification (NEC) application.

Storm-resistant shelters include buildings or structures that have complete roofs and walls, as well as structures with only a top cover but no side coverings, as long as the materials or activities under the structure are not otherwise subject to any run-on and subsequent runoff of stormwater, or mobilization by wind.

Facilities operating under a conditional no-exposure exclusion are subject to inspection by authorized TCEQ personnel to determine compliance with the exclusion. In addition, operators of facilities that qualify for this exclusion and that discharge stormwater to a municipal separate storm sewer system (MS4) must provide a copy of their NEC application to the MS4 operator, even if not required by the MS4.

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

Exceptions to Storm Resistant Shelters:

1. A facility may be able to obtain a no-exposure exclusion even if the following materials and activities are not completely isolated from precipitation and runoff by a storm-resistant shelter:
 - a. drums, barrels, tanks, and similar containers that are tightly sealed, provided those containers are not deteriorated and do not leak ("Sealed" means banded or otherwise secured and without operational taps or valves); and
 - b. final products that are produced by the facility operator and that are designed for outdoor use (e.g., new cars, outdoor play-sets, lawn equipment), provided the final products have not deteriorated and are not otherwise a potential source of contaminants.

However, the following types of final products would be considered exposed, and not eligible for the exclusion, even if they are designed for outdoor use:

- (1) Final products that could be mobilized by wind or rain into stormwater discharges (e.g., rock salt, wood chips or shavings, compost, plastic pellets, or bricks). Final products that are sheltered from direct precipitation may still be considered exposed if the materials could be carried by wind;
 - (2) final products that may, when exposed, oxidize, deteriorate, leak or otherwise be a potential source of contaminants (e.g., scrap cars, scrap metal); and
 - (3) final products that are actually intermediate products, i.e., that are used in the composition of yet another product (e.g., sheet metal, tubing and paint used in making tractors; plastic pellets; freshly chromed bumpers, creosoted railroad ties, galvanized building panels, galvanized fencing; and unfinished portions of a final product). Even if the intermediate product is "final" for a manufacturer and is intended to be included in a "final product intended for use outdoors," these products are still considered intermediate products for the purpose of the MSGP, and are considered exposed if they are not located in a storm resistant shelter;
- c. pallets used to store, or transport final products intended for outdoor use, if the pallets are new or if they are used and do not contain pollutants;
 - d. vehicles used in material handling that are adequately maintained to prevent leaking fluids;
 - e. lidded dumpsters containing waste materials associated with the regulated activity, provided that the containers are completely covered, no pollutants can drain out, and no material can be lost while loading the contents into a refuse / trash vehicle (excludes trash compactors that handle waste materials associated with the regulated activity, unless the compactor is located indoors or protected by a storm-resistant shelter);

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

- f. industrial refuse or trash that is stored in large roll-off containers located under a constructed cover or covered with securely fastened heavy-duty tarps, provided that the tarps are properly maintained and in good condition. If tarps show any signs of beginning to deteriorate, they would need to be replaced before they deteriorate. Tarps must be fastened to the waste containers in such a way that they would need to be unfastened and refastened each time waste materials are added;
- g. particulate emissions from roof stacks or vents, provided that they are in compliance with other applicable TCEQ rules and do not contaminate stormwater; and
- h. above-ground storage tanks (ASTs) that are equipped with valves for dispensing materials that support facility operations (e.g., heating oil, propane, butane, chemical feedstocks for facility equipment) or that dispense fuel (e.g., gasoline, diesel, compressed natural gas) for delivery vehicles provided that:
 - (1) the ASTs are located away from vehicle maintenance areas;
 - (2) there are no leaks from pipes, pumps, or other equipment that could come into contact with stormwater; and
 - (3) the ASTs are surrounded by secondary containment (e.g., impervious berm, dike, or concrete retaining structure) to prevent exposure to stormwater runoff in the event of structural failure or leaks.

ASTs that are used to directly fuel vehicles other than delivery vehicles (e.g., ASTs at airports that are used to dispense fuel to airplanes) are considered exposed.

- 2. Limitations on eligibility for the no-exposure exclusion:
 - a. The exclusion from permit requirements is only available facility-wide, and is not available for individual buildings, or individual outfalls. Generally, if any exposed industrial materials or activities exist on any portion of a regulated facility, the facility is not eligible for the no-exposure exclusion.
 - b. If a facility with a no-exposure exclusion undergoes any change that results in industrial activities or materials becoming exposed, then the exclusion ceases to apply. In such a case, the operator must obtain coverage under the MSGP or other applicable water quality permit for stormwater discharges before making any changes that will expose industrial activities or materials.
 - c. If the TCEQ or EPA determines that a facility's stormwater discharges have a reasonable potential to cause or contribute to a violation of applicable water quality standards, then TCEQ or EPA may deny the no exposure exclusion.

The TCEQ's Small Business and Environmental Assistance (SBEA) Division developed a guidance document, entitled "Conditional No-Exposure Exclusion for Stormwater Runoff (RG-467)," for determining if a facility may claim a conditional no-exposure exclusion from permit

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

requirements when material and activities are not located under storm resistant shelter. The guidance document provides additional information on the no-exposure conditional exclusion.

A facility that is able to meet the condition of no exposure is not prohibited from obtaining permit coverage.

C. Automatic Authorization:

The existing MSGP designates certain general warehousing facilities in Sector P, related to Land Transportation and Warehousing, that do not have any vehicle or equipment maintenance, fueling, or rehabilitation activities for automatic coverage. The general permit designates certain facilities in Sector X, related to Printing and Publishing Facilities for coverage, as well as small facilities in other sectors that are located completely inside of a private residence, a shopping mall, or office building that is not exposed to stormwater.

Operators of the following industrial facilities are designated for coverage under the general permit, and are not be required to: prepare a SWP3, submit an NOI for coverage nor an NEC application for a conditional no exposure exclusion, perform any inspections, monitoring, or representative sampling, maintain any discharge-related records, or perform any self-reporting:

1. Facilities described in Part V, Section P, related to General Warehousing and Storage (SIC 4225), that do not have areas for vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling, and lubrication) or equipment cleaning activities.
2. Facilities described under Part V, Section X, that conduct publishing or design without printing.
3. Regulated facilities described in Part II, Section A, where the entire industrial activity is performed completely inside of a residential home, a shopping mall, or an office building.

Operators of the above facilities must meet all of the following requirements in order to retain the automatic authorization option and exception from permitting requirements, and must apply for coverage if any of the requirements are not met:

1. The industrial activity must not include a regulated industrial activity code (HZ, LF, SE, or TW);
2. The industrial activity must be conducted completely within fully enclosed building, such as a garage, an office building, or a retail shopping mall;
3. The regulated industrial activity must not be exposed to stormwater; and
4. The facility operator must comply with the MSGP's Standard Permit Conditions, except that references to submittal of an NOI or an NEC application are not applicable.

If the Executive Director determines that additional controls are required other than those listed above, or if there is a concern regarding the discharge of elevated levels of pollutants, then the TCEQ may require a facility otherwise eligible for automatic authorization to obtain coverage and meet all permit conditions through submittal of an NOI or an individual permit application.

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

This provision is appropriate for these types of facilities, because they typically operate in such a way that industrial materials are not exposed to stormwater, and stormwater discharges are not expected to contain pollutants of concern. Facilities included under this provision of the permit are expected to contribute less pollutant loading than other facilities and it is appropriate for the TCEQ to automatically authorize these facilities. These facilities are hereby notified that they are regulated by the general permit even though they have not filed an NOI, in accordance with federal rules at 40 CFR §122.28(b)(2)(vi), and as adopted by TCEQ at 30 TAC §205.7. However, the TCEQ also recognizes that activities may occur at the site that do cause a water quality concern, in which case the TCEQ may require a facility otherwise eligible for automatic authorization to obtain coverage and meet all permit conditions through submittal of an NOI or an individual permit application.

A facility that is able to meet the requirements for automatic authorization would not be prohibited from obtaining permit coverage or a conditional no exposure exclusion by completing the NEC (based on having no exposure) or NOI application process for coverage.

- D.** Industrial facilities that qualify for coverage under the general permit may discharge the following non-stormwater discharges through outfalls identified in the SWP3, according to the requirements of the general permit:
1. discharges from emergency firefighting activities and uncontaminated fire hydrant flushings (excluding discharges of hyperchlorinated water, unless the water is first dechlorinated, and discharges are not expected to adversely affect aquatic life);
 2. potable water sources (excluding discharges of hyperchlorinated water, unless the water is first dechlorinated, and discharges are not expected to adversely affect aquatic life);
 3. lawn watering and similar irrigation drainage, provided that all pesticides, herbicides, and fertilizer have been applied in accordance with the approved labeling;
 4. water from the routine external washing of buildings, conducted without the use of detergents or other chemicals;
 5. water from the routine washing of pavement conducted without the use of detergents or other chemicals and where spills or leaks of toxic or hazardous materials have not occurred (unless all spilled material has been removed);
 6. uncontaminated air conditioner condensate, compressor condensate, and steam condensate, and condensate from the outside storage of refrigerated gases or liquids;
 7. water from foundation or footing drains where flows are not contaminated with pollutants, such as process materials, solvents, and other pollutants;
 8. uncontaminated water used for dust suppression (excludes reclaimed or reuse water used for dust suppression);
 9. springs and other uncontaminated ground water;
 10. incidental windblown mist from cooling towers that collects on rooftops or adjacent portions of the facility, excluding intentional discharges of utility wastewater from the cooling tower (e.g., cooling tower blowdown); and

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

11. other allowable non-stormwater discharges specifically listed in individual sections of Part V of the MSGP.

The purpose of providing the list of approved non-stormwater discharges is to clarify that certain discharges that may occur during normal operations of an industrial facility or a commercial facility, and these discharges do not require additional permit coverage. Inclusion of this list in the draft general permit is not meant to prohibit the above discharges that would otherwise be allowed without a TPDES permit. In addition, a facility that has obtained a conditional exclusion from permit requirements based on no exposure may discharge the above non-stormwater flows provided they are not causing or contributing to contamination of water quality.

E. The following stormwater discharges are not eligible for general permit coverage:

1. Discharges prohibited by 30 TAC Chapter 311 (relating to Watershed Protection) and 30 TAC Chapter 213 (relating to the Edwards Aquifer).
2. Discharges of the constituent(s) of concern to an impaired water body for which there is a TMDL implementation plan; however, the discharge may be eligible if it is consistent with the approved TMDL and the implementation plan. The TCEQ may amend the general permit or develop a separate general permit for discharges to these water bodies. For discharges not eligible for coverage under this permit, the discharger must apply for and receive an individual or other applicable general permit prior to discharging.
3. Discharges from facilities that are regulated by the Railroad Commission (RRC) of Texas, including crude oil and natural gas facilities; except that the TCEQ regulates stormwater discharges from petroleum refineries, refined produce pipelines, and oil and gas field services activities that occur at a corporate headquarters or other similar base of operations, as described in the general permit. Additional information on which facilities the TCEQ regulates may be found in the Memorandum of Understanding (MOU) between the TCEQ and the RRC, 16 TAC §3.30.
4. Discharges that the TCEQ determines are causing or contributing to a receiving water not maintaining its existing uses.
5. Discharges that the TCEQ determines would adversely affect a listed endangered or threatened species or its critical habitat. Federal requirements related to endangered species apply to all TPDES permitted activities, and site-specific controls may be required via an individual stormwater permit to ensure that protection of endangered species is achieved.
6. Contact stormwater from certain facilities, as specifically described in the relevant sections of Part V of the MSGP, related to sector-specific requirements.

F. Facilities that dispose of stormwater by any of the following practices would not be required to obtain coverage under the MSGP nor under an individual permit:

1. Recycling of the stormwater with no resulting discharge into surface water in the state;
2. Pumping and hauling of the stormwater to an authorized disposal facility;
3. Discharge of the stormwater to a publicly owned treatment works (POTW);

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

4. Underground injection of the stormwater in accordance with 30 TAC Chapter 331 (relating to Underground Injection Control);
5. Discharge to above-ground storage tanks (ASTs) with no resulting discharge into surface water in the state; or
6. Containment of all stormwater within property boundaries, with no potential to discharge into surface water in the state, either during or as the result of any storm event.

The operator of the industrial activity may be required to demonstrate, using engineering calculations or other appropriate methods, that no discharge would occur from the site as a result of any storm event(s).

IV. Permit Conditions and Effluent Limitations

A. Numeric Effluent Limitations (Industry–Specific):

1. Federal Effluent Guidelines and Standards: The MSGP includes numeric effluent limits for stormwater discharges from industrial facilities as described in EPA’s effluent guidelines and standards, or effluent limitations guidelines (ELGs), in 40 CFR, Subchapter N Chapters 400-471. These discharges are also required to submit discharge monitoring reports (DMRs) on an annual basis, consistent with federal rules at 40 CFR §122.44 (i)(3), as adopted by reference in 30 TAC §281.25.

The following industrial sectors include numeric limits based on these ELGs, and include a sampling frequency of once per year (unless otherwise described below). For pollutants with a daily average or monthly average limit, the “average” limit only applies when more than one sample is collected and analyzed in a calendar month.

- a. Sector A, Timber Products Facilities: 40 CFR Part 429, Subpart I (40 CFR §429.103), *Timber Products Processing Point Source Category, Wet Storage Subcategory*:

Table 1. Effluent Limitations for Discharges of Wet Decking Water

Pollutant	Limitations (mg/L)
Debris	No Discharge*
pH	6 – 9 standard (std) units

*Debris includes woody material that will not pass through a one-inch diameter round opening.

- b. Sector C, Chemical and Allied Products Manufacturing Facilities: 40 CFR Part 418, Subpart A (40 CFR §418.13), *Fertilizer Manufacturing Point Source Category, Phosphate Subcategory*

Table 2. Effluent Limitations for Discharges of Contact Stormwater from Facilities that Manufacture Phosphatic Fertilizers

Pollutant	Daily Average Limitations (mg/L)	Daily Maximum Limitations (mg/L)
Phosphorus (as P)	35	105
Fluoride	25	75

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

- c. Sector D, Asphalt Paving and Roofing Materials and Lubricant Manufacturing Facilities: 40 CFR Part 443, Subpart A (40 CFR §443.13), *Paving and Roofing Materials (Tars and Asphalt) Point Source Category, Asphalt Emulsion Subcategory*

Table 3. Effluent Limitations for Discharges of Stormwater Runoff from Facilities that Produce Asphalt Paving and Roofing Emulsions

Pollutant	Daily Average Limitations (mg/L)	Daily Maximum Limitations (mg/L)
Total Suspended Solids (TSS)	15	23
Oil and Grease	10	15
pH	6 – 9 (std) units	6 – 9 (std) units

- d. Sector E, Glass, Clay, Cement Concrete, and Gypsum Product Manufacturing Facilities: 40 CFR Part 411, Subpart C (40 CFR §411.32), *Cement Manufacturing Point Source Category, Materials Storage Piles Runoff Subcategory*

Table 4. Effluent Limitations for Discharges of Stormwater Runoff from Material Storage Piles from Facilities that Manufacture Cement

Pollutant	Daily Maximum Limitations (mg/L)
TSS	50
pH	6 – 9 (std) units

- e. Sector J, Mineral Mining and Processing Facilities: 40 CFR Part 436, Subparts B, C, and D (40 CFR §§436.22, 436.32, and 436.42), *Mineral Mining and Processing Point Source Category: Crushed Stone Subcategory, Construction Sand and Gravel Subcategory, and Industrial Sand Subcategory*

Table 5. Effluent Limitations for Discharges of Stormwater and Ground Water Seepage from Mine Dewatering Activities at Construction Sand and Gravel, Industrial Sand, and Crushed Stone Mining Facilities

Pollutant	Daily Average Limitations (mg/L)	Daily Maximum Limitations (mg/L)
TSS	25	45
pH	6 – 9 (std) units	6 – 9 (std) units

- f. Sector O, Steam Electric Generating Facilities: 40 CFR Part 423 [§§423.12(b)(1), (9) and (10)], *Steam Electric Power Generating Point Source Category*

Table 6. Effluent Limitations for Facilities Discharging Coal Pile Runoff

Pollutant	Daily Maximum Limitations (mg/L)
TSS	50
pH	6 – 9 (std) units

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

- g. Sector S, Air Transportation: 40 CFR Part 449, Subpart A (§§ 449.1 - 449.20), *Airport Deicing Point Source Category*, and Subpart B, Appendix to Part 449, *Sampling Protocol for Soluble COD*.

Table 7. Effluent Limitations for Discharges of Stormwater Runoff from Airport Deicing Activities

Pollutant	Daily Maximum Limitations (mg/L)
COD	271
Ammonia-Nitrogen	14.7

- 2. Other Numeric Effluent Limitations (Hazardous Metals):
 - a. Effluent limits for hazardous metals are continued from the existing permit, and are consistent with TCEQ rules at 30 TAC Chapter 319, Subchapter B (related to Hazardous Metals). The monitoring frequency is once per year; therefore, only the daily maximum effluent limitations were included in the draft permit:

Table 8. Effluent limits for hazardous metals discharging into inland and tidal waters

Parameter (Total)	Discharges to Inland Waters (mg/l)	Discharges to Tidal Waters (mg/l)
Arsenic	0.3	0.3
Barium	4.0	4.0
Cadmium	0.2	0.3
Chromium	5.0	5.0
Copper	2.0	2.0
Lead	1.5	1.5
Manganese	3.0	3.0
Mercury	0.01	0.01
Nickel	3.0	3.0
Selenium	0.2	0.3
Silver	0.2	0.2
Zinc	6.0	6.0

- b. The renewed permit continues the reporting requirement for facilities that discharge in excess of the following numeric effluent limitations for hazardous metals to submit DMRs on an annual basis. This requirement is according to 40 CFR §122.44 (i)(5), as adopted by reference by TCEQ, and would apply to facilities described in the permit under any of the sectors of industrial activity.

B. Stormwater Pollution Prevention Plan (SWP3, or plan):

The draft general permit continues the existing requirement to develop and implement a SWP3 to control discharges of stormwater associated with industrial activities, in accordance with National Pollutant Discharge Elimination System (NPDES) stormwater regulations at 40 CFR §122.26 (b)(14)(viii), and as adopted by reference in 30 TAC

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

§281.25(a)(4) (relating to Additional Facilities and Projects for which TPDES Permits are Required). The draft permit includes specific provisions that must be incorporated into facility's SWP3. These include, at a minimum, the following elements:

1. Establish a Stormwater Pollution Prevention Team
 2. Inspect facility for non-stormwater flows (e.g., process wastewater, vehicle or equipment cleaning water, contact or noncontact cooling water, boiler blowdown, cooling tower blowdown, hydrostatic testing water, groundwater.)
 3. Describe potential pollutant sources:
 - (a) List an inventory of exposed materials;
 - (b) Develop a narrative description of activities and sources that may contribute to stormwater pollution;
 - (c) Develop a site map;
 - (d) List historical spills and leaks (including reportable quantity (RQ) spills required by 30 TAC Chapter 327 (relating to Spill Prevention and Control)), and keep log of any additional spills and leaks; and
 - (e) Summarize all sampling data.
 4. Describe pollution prevention measures and controls, including:
 - (a) Good Housekeeping;
 - (b) Spill Prevention and Response;
 - (c) Erosion Control;
 - (d) Maintenance program for structural controls;
 - (e) BMPs used to reduce pollutants in runoff;
 - (f) Employee training and education programs;
 - (g) Monitoring activities; and
 - (h) Records of above.
- C. Additional Monitoring and Reporting:** The draft general permit continues the following monitoring requirements from the existing general permit, with revisions as noted:
1. **Benchmark Monitoring and Reporting:** The draft permit continues the requirement for certain industrial sectors to collect discharge samples for comparison to benchmark levels. The draft permit revises the levels of two benchmark parameters in two separate sectors: Total suspended solids (TSS) and biochemical oxygen demand (BOD₅). These changes are listed below (paragraph IV.C.1.(c) of this fact sheet) and are further described in Appendix A of this fact sheet:
 - (a) The draft permit requires sampling once per six months for the first two years of the permit term. Monitoring requirements begin in the first full six-month period, January 1st through June 30th or July 1st through December 31st. The permittee would not be required to conduct benchmark monitoring during the third and fourth year, if the results of the first two year's monitoring are *below* benchmark values. Results of monitoring for the first and second reporting years would be reported to

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

the TCEQ. The permittee would be required to conduct monitoring and submit results for the third and fourth years, if the results of the benchmark monitoring during the first two year's monitoring are *above* benchmark values.

If sampling is performed for a pollutant in which a waiver was obtained, and the result for that pollutant is greater than the benchmark level, then the waiver ceases for that pollutant. In addition, any waivers obtained from benchmark sampling do not affect sampling that is required to comply with numeric effluent limits in the permit.

- (b) The draft permit includes revised benchmark levels for the following two pollutants, which were established based on data evaluated during the 2017 through 2019 calendar years:

Table 9. Benchmark Levels for Pollutants Evaluated in 2017 - 2019

Benchmark Parameter	2016 MSGP (mg/L)	Proposed 2021 (mg/L)
TSS	100	50, for selected activities
BOD ₅	20	15

- (c) Sector-Specific Changes to Benchmark Parameters:

Sector T (Treatment Works): BOD₅ lowered from 20 to 15 mg/L for activity codes (TW).

Sector U (Food and Kindred Products Facilities): TSS lowered from 100 to 50 mg/L for SIC codes 2074-2079.

The above changes to benchmark sampling are further described and explained in Part X.C. and Appendix A of this fact sheet.

- 2. Quarterly visual monitoring of discharges: The draft permit continues the existing requirement to conduct visual sampling of the discharge at least once per quarter and adds that visual sampling is required only during normal operating hours.
- 3. Quarterly inspections of structural controls: The draft permit continues the existing requirement to inspect the structural controls used to control the discharge of pollutants in stormwater.
- 4. Annual Comprehensive Site Compliance Investigation and Report: The draft permit continues the existing requirement to perform a comprehensive site compliance evaluation and to prepare a report detailing the findings.

V. Changes From Existing General Permit:

- A. The changes to the permit are listed below:

- 1. Part I. Removed the regulatory language in the definition of Waters of the United States, and instead cited 40 CFR § 122.2 because the definition in the MSGP was outdated.

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

2. Part II.C.2. Switched paragraph (1) and (2) since paper NOIs and NECs are no longer allowed based on federal electronic reporting rules in 40 CFR Part 127, unless the applicant requests and obtains a waiver from electronic reporting.
3. Part II.C.2. Changed provisional coverage from seven days to 48 hours for paper applications to be consistent with other water quality general permits.
4. Part II.C.5. Added that the following items also are needed on the NOI to comply with federal electronic reporting requirements in 40 CFR Part 127: location of outfall(s), industrial activities subject to federal effluent limitation guidelines, discharging pollutant(s) of concern, and waiver criteria from monitoring hazardous metals.
5. Part II.C.6. Switched paragraph (1) and (2) since paper NOCs are no longer allowed, unless the permittee requests and obtains a waiver from electronic reporting.
6. Part II.C.6. Added that the NOC, submitted either electronically or by paper, must be provided to the MS4 operator.
7. Part II.C.6.(e). Added new items that would require an NOC to comply with federal electronic reporting requirements in 40 CFR Part 127: adding or removing activities with federal effluent limitations; adding, removing, or changing the location of an outfall; stopping submittal of monitoring results of benchmarks and hazardous metals; and changing the status of a facility.
8. Part II.C.6.(f). Added that Delegation of Signatory Authority forms must be submitted to TCEQ by using TCEQ's STEERS online system.
9. Part II.C.7.(b). Added that a copy of the NOT, submitted either electronically or by paper, must be sent to the MS4, if required by the MS4.
10. Part III.A.1. Added that an "updated" SWP3 must be developed and implemented before submitting an NOI.
11. Part III.A.4.(c). Added that the SWP3 of facilities handling pre-production plastic must contain good housekeeping measures and BMPs to eliminate plastic in stormwater to clarify rules and to ensure water quality protection.
12. Part III.B.5. Added that a copy of the Delegation of Signatory Authority notification submitted to TCEQ must be included in the SWP3.
13. Part III.A.3.(c). Added that the general location map, for sites with large plots of lands where no industrial activity is conducted needs to depict those areas, and that no outfall(s) need to be assigned for those areas.
14. Part III.A.3.(d). Added that the Drainage Area Site Map needs to include latitude and longitude on outfalls.
15. Part III.A.3.(d). Added that the SWP3's list of spills and leaks must include those "that could contribute pollutants to stormwater discharges."
16. Part III.A.5(3). Added that the formal notification to TCEQ for Delegation of Signatory Authority must be done electronically through STEERS or by paper on a Delegation of Signatories to Reports form (TCEQ-20403) if the permittee requests and obtains a waiver from electronic reporting. A copy of the notification must be included in the SWP3.

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

17. Part III.A.5.(11). Added that documentation of the criteria for claiming a waiver from monitoring hazardous metals must be included in the SWP3.
18. Part III.B.4.(e). Added that reporting for the pollutant of concern must be completed electronically using the online Network Discharge Monitoring Report system (NetDMR), unless the permittee requests and obtains an electronic reporting waiver.
19. Part III.C. Added a paragraph to distinguish between the two types of numeric effluent limitations required: hazardous metals and discharges subject to federal effluent limitations guidelines. Clarified that results of hazardous metals are kept onsite, unless results exceed limits in the general permit, in which case they are reported to TCEQ.
20. Part III.C.1.(b). Clarified that reporting of hazardous metals must be completed electronically using the online NetDMR system, unless the permittee requests and obtains an electronic reporting waiver.
21. Part III.C.1.(d). Added that a copy of the criteria for claiming a waiver from monitoring hazardous metals must be included in the SWP3.
22. Part III.C.2. Added Table 3. showing regulated discharges subject to federal categorical guidelines and moved sampling and reporting requirements for those discharges from Part V to this section.
23. Part III.D.4.(a). Added that the SWP3 needs to include a narrative for the nature of adverse condition and readings of an on-site rain gauge, a representative weather station, or subject to TCEQ's approval, an alternative means of compliance for rain event monitoring. Also added that monitoring must be conducted at the next representative rain event or in the next monitoring period, whichever comes first.
24. Part III.D.4.(b). Added that the permittee must submit an NOC to notify TCEQ about changing status of an industrial facility (i.e., from active to inactive and unstaffed or vice versa).
25. Part III.D.4.(c). Added a paragraph "Lack of Qualifying Storm Event" clarifying that monitoring is temporarily suspended if there was a lack a qualifying storm event.
26. Part III.E.6.(a).(2). Added that DMRs for hazardous metals are only submitted to TCEQ when results exceed permit limits.
27. Part III.E.6.(a).(4). Replaced the word "non-compliance" with "Exceedance."
28. Part III.E.6.(b).(2). Replaced the word "deviates" with "exceeds."
29. Part III.E.6.(b).(3). Removed language in paragraphs (a) and (b) because it is no longer necessary to send DMRs to the regional offices since results can be retrieved from the electronic online NetDMR system; also those requirements were already described in Part III.E. 6.(a).
30. Part IV. Revised the first paragraph to clarify that benchmark monitoring data are used to determine overall effectiveness of BMPs and removed the previous Table 3. "List of sectors with monitoring requirements, benchmark parameters, and benchmark levels."

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

31. Part IV.B.1.(c). Added that monitoring is not required in year five of the permit cycle since it does not have two full six months monitoring periods.
32. Part IV.B.2(a). Added that benchmark monitoring results must be submitted during monitoring years one through four, unless the permittee requested a benchmark waiver after the two first monitoring years. Added that results must be submitted electronically using the online NetDMR system unless the permittee requests and obtains an electronic reporting waiver.
33. Part IV.B.2.(c) in the 2016 MSGP that allowed a permittee to retain analytical benchmark monitoring results on site during monitoring years three and four was removed as a result of the federal electronic reporting requirements. The results must be submitted electronically using the online NetDMR system.
34. Part V. Sectors A, C, D, E, J, O, and S. Modified tables for numeric effluent limitations based on federal effluent guidelines.
35. Part V. Sectors E, J, O. Revised the language to require that rain events are monitored by using an on-site rain gauge, a representative weather station, or subject to TCEQ's approval, an alternative means of compliance.
36. Part V. Section J.9.(d). Added requirements to implement BMPs for off-site vehicle tracking of sediments, generation of dust, dewatering of trenches and excavations, and pumping or dewatering of standing water to more closely match TCEQ's CGP (TXR150000) and EPA's MSGP.
37. Part V. Section L.(2). Added definitions for "Final Cover" and "Intermediate Cover" to be consistent with regulations for solid waste.
38. Part V. Section L.5.(d).1. Replaced "trenches" with "units" and added that the site map also must depict inactive solid waste land fill cells or units.
39. Part V. Section L.(5).(e).4. Replaced "Interim" with "Intermediate."
40. Part V. Section L.(5).(b). Removed examples of temporary stabilization measures.
41. Part V. Section T.5. Revised the benchmark value for BOD₅ from 20 mg/L to 15 mg/L.
42. Part V. Section U.4. Revised the benchmark value for TSS from 100 mg/L to 50 mg/L.
43. Part V. Section Y.2. Added a requirement to implement BMPs for the control of pollutants in stormwater at rubber, miscellaneous plastic products and miscellaneous manufacturing facilities. Required that plastic product manufacturing facilities implement a containment system to trap plastic particles. The additional requirements are added to clarify rules and to ensure water quality protection.
44. Made additional changes throughout the permit that help to clarify the intent of the general permit.

Supplementary information on this fact sheet is organized as follows:

- VII. Legal Basis
- VIII. Regulatory Background
- IX. Permit Coverage
- X. Technology-based Requirements
- XI. Water Quality-based Requirements
- XII. Monitoring
- XIII. Procedures for Final Decision
- XIV. Administrative Record

VII. Legal Basis

Section (§) 26.121 of the Texas Water Code (TWC) makes it unlawful to discharge pollutants into or adjacent to water in the state in the absence of authorizing permits. TWC §26.027 authorizes the commission to issue permits and amendments to permits for the discharge of waste or pollutants into or adjacent to water in the state. TWC §26.040 provides the commission with authority to amend rules adopted under §26.040 prior to amendment of the statute by House Bill (H.B.) 1542 in 1997, and to authorize waste discharges by general permit. On September 14, 1998, the TCEQ received authority from the EPA to administer the TPDES. The TCEQ and the

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

EPA have signed a Memorandum of Agreement (MOA) that authorizes the administration of the TPDES program by the TCEQ as it applies to the State of Texas.

Clean Water Act (CWA) Sections 301, 304, and 401 (33 United States Code 1331, 1314 and 1341) include provisions which state that TPDES permits must include effluent limitations requiring authorized discharges to: (1) meet standards reflecting levels of technological capability, (2) comply with EPA-approved state water quality standards and (3) comply with other state requirements adopted under authority retained by states under CWA §510, 33 U.S.C. §1370.

Two types of technology-based effluent limitations must be included in the proposed general permit. Regarding conventional pollutants, CWA §301 (b)(1)(E) requires effluent limitations based on “best conventional pollution control technology” (BCT). With regard to nonconventional and toxic pollutants, CWA §301(b)(2)(A), (C), and (D) require effluent limitations based on “best available pollution control technology economically achievable” (BAT), a standard which generally represents the best performing existing technology in an industrial category or subcategory. BAT and BCT effluent limitations may never be less stringent than corresponding effluent limitations based on best practicable control technology (BPT), a standard applicable to similar discharges before March 31, 1989 under CWA §301(b)(1)(A).

VIII. Regulatory Background

The 1972 amendments to the Federal Water Pollution Control Act, later referred to as the Clean Water Act (CWA), prohibit the discharge of any pollutant to navigable waters of the United States from a point source unless the discharge is authorized by a NPDES permit. Efforts to improve water quality under the NPDES program traditionally have focused on reducing pollutants in industrial process wastewater and municipal sewage treatment plant discharges. Over time, it has become evident that more diffuse sources of water pollution, such as stormwater runoff from industrial facilities, construction sites, and municipal separate storm sewer systems (MS4s) are also significant contributors to water quality problems.

EPA promulgated rules establishing requirements for discharges of stormwater runoff associated with industrial activities, at 40 CFR §122.26. These rules were subsequently adopted by reference in TCEQ rules at 30 TAC §281.25(a) and are being implemented in part through reissuance of the MSGP.

TCEQ received authority to administer the TPDES permit program in Texas, for those discharges under the regulatory authority of the agency, on September 14, 1998. Under the MOA between the two agencies, EPA agreed to continue to administer the multi-sector general permit (MSGP) permit until the September 29, 2000 expiration date. The original TPDES permit was issued on August 20, 2001, and included the Phase II rules for the NPDES stormwater permit program which were finalized on December 8, 1999. The existing MSGP, which replaced the 2008 TPDES MSGP, was issued August 14, 2011 and expires on August 14, 2016. The renewed MSGP would continue the authorization for industrial facilities in Texas for five years from the effective date of the permit.

IX. Permit Coverage

A. Scope of Permit Coverage

This general permit applies to discharges of stormwater runoff associated with industrial activity, and certain non-stormwater discharges, into surface water in the state. The general permit specifies which particular industrial facilities are eligible for authorization by the general permit, which must be authorized by a separate permit, and the specific

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

conditions that must be met in order to receive an exclusion from requirements to develop a SWP3 and to submit a notice of intent. The proposed general permit would provide authority for any facility currently authorized under the TPDES permit to continue to discharge. The general permit would also continue the requirements for certain oil exploration, production, processing, or treatment operations that are controlled under the authority of the Railroad Commission of Texas (RRC) to apply to EPA and the RCT for authorization to discharge stormwater runoff associated with industrial activities.

Permit applicability is based on the facility's primary SIC code, or by a listed Industrial Activity Code, and includes stormwater discharges regulated in federal guidelines in 40 CFR Parts 400-471 (effluent limitations guidelines, or ELGs). Industrial facilities that are required to obtain authorization to discharge stormwater runoff are grouped into 30 sectors, Sectors A through AD. A facility's SIC Code is the SIC code which best describes the main activity occurring at the site. EPA provided information regarding the primary SIC code by referencing the SIC Manual. According to the EPA, the SIC Manual recommends using the value of receipts or revenues to determine the primary activity. If such information is not available for a particular facility, then number of employees or production rate for each process may be compared. The operation that generates the most revenue or employs the most personnel is the operation in which the facility is primarily engaged. In the case of industrial activity codes, a facility is subject to permitting requirements regardless of whether the Industrial Activity Code describes the primary activity or only a minor activity occurring at the site. If a facility conducts secondary activities that are described by an SIC code that is listed in the table, then discharges from these additional activities are described as co-located activities and must be authorized. Stormwater discharges from co-located industrial activities may be authorized under the general permit, provided that the operator complies with all of the sector specific requirements defined in the general permit for each of the co-located activities. Co-located activities are only required to be permitted at a facility that is already required to be regulated based on the primary SIC code or the Industrial Activity Code.

The following industrial activities are proposed to be eligible for authorization under the draft general permit:

SECTOR A: TIMBER PRODUCTS

SIC Code	SIC Code Description	2017 NAICS Code	NAICS Code Description
2411	Logging	113310	Logging
2421	General Sawmills and Planing Mills	321113	Sawmills

SECTOR AD: MISCELLANEOUS INDUSTRIAL ACTIVITIES

Activity Codes and Description of Industry

Limited to facilities that are designated by the executive director as needing a permit to control pollution related to stormwater discharges and that do not meet the description of an industrial activity covered by Sectors A-AC.

B. Procedures for Obtaining Permit Coverage

1. Except as described in Section IX.B.(2) below, facilities eligible for coverage under the proposed general permit would apply for coverage through submission of a notice of intent (NOI) to the Executive Director. Facilities seeking to obtain an exclusion from permit requirements based on a condition of no exposure would notify the TCEQ through submission of a No Exposure Certification (NEC) to the Executive Director. NOTE: An NEC is effectively an alternate NOI for facilities eligible to claim a no-exposure exclusion.
2. The NOI or NEC must be signed in accordance with 30 TAC §305.44 (relating to Signatories to Application). Electronic submittal of NOIs or NECs through

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

TCEQ's STEERs system is required, and coverage begins immediately upon receiving electronic notification from TCEQ. If the applicant requests and obtains a waiver from electronic reporting, then paper applications may be submitted, in which case, provisional authorization to discharge would begin 48 hours after a completed NOI or NEC is postmarked for delivery to the TCEQ.

3. Designation of Permit Coverage (Automatic Authorization):
 - a. The following facilities are designated by TCEQ as requiring coverage under the MSGP, but are not required to submit an NOI for coverage, provided that certain conditions are met:
 - i. Facilities that are regulated based on their primary SIC code or industrial activity code, and that occur completely within a residential home, a shopping mall, or an office building, and that have no exposure of any regulated activity to stormwater;
 - ii. Publishing and designing companies that do not perform printing activities and that have no exposure of any regulated activity to stormwater; and
 - iii. General warehousing and storage facilities described by SIC Code 4225 that have no exposure of industrial activity to stormwater, and that have no areas used for vehicle and equipment maintenance activities, vehicle and equipment rehabilitation, mechanical repairs, painting, fueling and lubrication, and cleaning.
 - b. The above-referenced facilities will be notified of their coverage under the general permit as part of the public notice for the draft permit, which is appropriate based on EPA rules at 40 CFR §122.28(b)(2)(vi), relating to General Permits. These designated facilities are not required to submit an NOI for coverage, but must meet the following permit requirements:
 - i. Maintain a condition which ensures that there is no exposure of industrial activities to stormwater; and
 - ii. Comply with the Standard Permit Conditions, except that references to the submittal of an NOI are not applicable.

The facility operator must apply for coverage if any of the above requirements are not met. If the TCEQ determines that additional controls are required other than those listed above, or that there is a concern regarding the discharge of elevated levels of pollutants, then the TCEQ may require a facility operator to meet all permit conditions and obtain coverage through submittal of an NOI or an individual permit application. This permit condition is appropriate for the designated facilities, because they typically operate in such a way that industrial materials are not exposed to stormwater, and stormwater discharges are not expected to contain pollutants of concern. However, the Executive Director also recognizes that activities may occur at the site that do cause a water quality concern, and an NOI or an individual permit application may be required at any time
4. Review of Application: Following an administrative review of an NOI or NEC, the Executive Director will either confirm coverage (or conditional exclusion, as

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

applicable) by providing a notification and an authorization number to the applicant or will deny coverage. If coverage is denied, then the operator must either submit an application for an individual permit or obtain coverage under an alternative general permit, if available. Submittal of the NOI or NEC is an acknowledgment by the applicant that the general permit applies to the proposed discharges and that the applicant agrees to comply with the terms of the permit.

5. Deadlines for Obtaining Coverage:
 - a. Existing Facilities: Facilities that have coverage under the existing TPDES MSGP must re-apply within 90 days of the permit effective date to maintain continued coverage under the renewed general permit and to retain the existing authorization number.

Existing facilities that were not provisionally authorized by the existing TPDES MSGP must apply immediately.

Existing facilities that do not submit NOIs or NECs within 90 days of permit issuance will automatically be cancelled. Any applications submitted electronically, or on paper with an electronic reporting waiver, after the deadline will be processed as new applications, and a new authorization number will be assigned.
 - b. New Facilities: Facilities which are new or which were not previously authorized under the existing MSGP must submit an NOI (or an NEC, if applicable) prior to the initiation of industrial activity that could result in a discharge of regulated stormwater runoff.
6. Information to be Submitted on an NOI or NEC application:
The NOI application requires, at a minimum, the following information:
 - a. Operator Information: legal name and contact information
 - b. Site Information:
 - (1) Location (name, address, county, latitude / longitude).
 - (2) Location of outfalls.
 - (3) A determination of whether the site is located on Indian Land.
 - (4) The name of the receiving water(s).
 - (5) The name of the MS4 operator, if the discharge is first to an MS4.
 - (6) Appropriate certification statement (for NOIs, a certification statement that a SWP3 has been developed and implemented according to the provisions of the permit; and for NECs, a certification that the facility meets a condition of no exposure as required in the MSGP).
 - (7) The primary SIC code and any other SIC code(s) or Industrial Activity Code(s) that describe additional activities that are identified in the permit as requiring permit coverage.
 - (8) Industrial activities of the facility that are subject to federal effluent limitations guidelines.

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

- (9) The industrial sector(s) of the general permit that applies to the facility.
 - (10) If discharging a pollutant of concern to an impaired waterbody.
 - (11) If applicable, waiver criteria from sampling for hazardous metals are updated and met.
 - (12) Status of the facility (active or inactive and unstaffed).
- c. The existing TPDES authorization number (or no exposure authorization number) for existing facilities seeking to renew coverage (or the conditional exclusion from coverage)
 - d. An original signature, signed according to 30 TAC §305.44 (relating to Signatories to Application).

C. Terminating Permit Coverage

A permittee may terminate coverage under the proposed permit or may terminate a no exposure authorization by submitting a notice of termination (NOT) to the Executive Director. The NOT must be signed in accordance with 30 TAC §305.44 (relating to Signatories to Application). Authorization to discharge terminates immediately following confirmation of receipt of the electronic NOT by the TCEQ. If the permittee has obtained a waiver from electronic reporting and a paper NOT is submitted, authorization to discharge terminates at midnight on the day that an NOT is postmarked for delivery to the TCEQ. An NOT must be submitted within ten (10) days after the potential to discharge stormwater associated with industrial activity has ceased or the operator obtains coverage under an individual permit or alternative general permit. See the following paragraph for a discussion on no exposure, and see paragraph D. below for information on how to process a transfer of operational control.

Changing Condition Related to Exposure: An NOT must also be submitted in order to terminate coverage or to terminate a conditional exclusion based on no exposure. If a facility changes operations such that a condition of no exposure is obtained, then the permittee must submit an NOT to terminate the original NOI before submitting an NEC. If a facility which changes conditions such that a condition of no exposure no longer exists, the permittee must submit an NOT to terminate the conditional exclusion, and must obtain coverage before discharge occurs. The only exception to this is within the first 90 days of permit issuance. If a permittee does not submit an NOT within the first 90 days of permit issuance, then the existing NOI or NEC will automatically be terminated, as stated above in Part IX.B.(1) of this fact sheet.

D. Transfer of Permit Coverage

Permit coverage may not be transferred. When a new operator assumes responsibility for a facility, a new NOI must be submitted at least ten (10) days before taking operational control of the facility. The previous owner or operator must terminate permit coverage within ten (10) days prior to the transfer of ownership or responsibility. This timeframe is required by 30 TAC §210.4(h).

E. Public Involvement

Information on the ability for the public to participate in the development and issuance of the MSGP is discussed in Part XIII of this fact sheet, *Procedures for Final Decision*.

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

In general, coverage is considered nonprovisional upon submittal of an application or upon meeting requirements to obtain authorization in the instances where no application is required. Because MSGP authorizations are acted on by the Executive Director of the TCEQ, a person who does not agree with the action may file a motion to overturn the authorization, or decision, within 23 days after the application is deemed approved (See 30 TAC §50.139, related to Motion to Overturn Executive Director's Decision). In addition, any interested person may petition the Executive Director to require a discharger authorized by a general permit to apply for and obtain an individual TPDES permit. (See 40 CFR §122.28(b)(3)(i), which was adopted by TCEQ at 30 TAC §205.7). Examples of factors that may require a discharger to obtain an individual permit include: noncompliance with the conditions of the general permit; a change in operations since the initial application was made so that the discharger is no longer appropriately controlled under the general permit; or the discharge(s) is a significant contributor of pollutants.

X. Technology-Based Requirements

A. Stormwater Pollution Prevention Plan (SWP3)

The draft general permit continues the requirement to develop and implement a SWP3 to control discharges of contact stormwater and stormwater associated with industrial activities, in accordance with NPDES stormwater regulations at 40 CFR §122.26 (b)(14)(viii), and as adopted by reference in 30 TAC Chapter 281 (relating to Applications Processing).

A SWP3 is required to be prepared and implemented for each facility covered by this permit. However, the permit also provides for shared SWP3s for collocated facilities (e.g., tenants at an industrial complex or airport). The plan must identify potential sources of pollution that may reasonably be expected to affect the quality of the discharges. The plan must describe the BMPs that are used to reduce the pollutants in stormwater, ensure the implementation of these practices, and ensure compliance with the terms and conditions of the general permit. Permittees must implement the provisions of the SWP3 as a condition of the general permit.

The draft general permit also requires that the permittees amend the plan whenever there is a change in design, construction, operation, or maintenance that has a significant effect on the potential for the discharge of pollutants to water in the state, or if the SPW3 proves to be ineffective in eliminating or significantly minimizing pollutants from sources identified in the contents of the SWP3, or in otherwise achieving the general objectives of controlling pollutants in the stormwater discharges.

The draft permit includes specific provisions which must be incorporated into a SWP3. These include, at a minimum, the following elements:

1. Establishing a pollution prevention team to oversee development and implementation of the stormwater pollution prevention plan;
2. Investigating and eliminating non-stormwater discharges that are not covered under the authority of the proposed general permit or a separate individual permit;
3. Identifying potential pollutants and sources of pollution to stormwater runoff;
4. Establishing pollution prevention measures and controls, including good housekeeping measures and other BMPs;

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

5. Considering the management of runoff using BMPs such as structural controls and discharge minimization to protect the natural physical characteristics of receiving waters; and
6. Evaluating the effectiveness of the SWP3 through inspections.

B. Numeric Effluent Limitations

The draft general permit would continue the numeric effluent limitations of the current permit. The MSGP includes technology-based numeric effluent limitations for discharges subject to federally established guidelines delineated in the Code of Federal Regulations as well as technology-based numeric effluent limitations that are listed in state rules for hazardous metals. The technology-based numeric effluent limitations are proposed as follows:

1. For All Discharges - Limitations for hazardous metals delineated at 30 TAC Chapter 319 (General Regulations Incorporated into Permits), Subchapter B (Hazardous Metals). A waiver from these effluent limits will continue to be available in the proposed MSGP for one (1) or more of the regulated metals if any of the following criteria are met:
 - a. the permittee certifies that the regulated facility does not use a raw material, produce an intermediate product, or produce a final product that contains the hazardous metal(s) for which the waiver is being sought; or
 - b. the permittee certifies that any raw materials, intermediate products, or final products that contain any hazardous metal(s) are never exposed to stormwater or runoff, except that final products are not considered to expose hazardous metals to stormwater or runoff if the final product is designed for outdoor use, unless it is a product that could be transported by stormwater runoff or unless the final product will be used as a material or intermediate product (similar to the considerations for “no exposure” described in Paragraph III.B.1. of this fact sheet); or
 - c. the permittee collects a sample of the discharge from the facility, analyzes the sample for the hazardous metal(s) for which a waiver is being sought, and the results indicate that the metal(s) is/are not present in detectable levels based on the minimum analytical level (MAL).
2. For Industry-Specific Discharges Subject to Federal Categorical Effluent Limitations Guidelines (ELGs): Refer to Paragraphs IV.A.1.a through g of this fact sheet.

C. Benchmark Monitoring Requirements

The current TPDES MSGP continues a requirement from EPA's 1995 MSGP and TCEQ's 2001, 2006, 2011, and 2016 MSGP for certain industries to monitor for one or more specific pollutants that are generally associated with discharges from those industries. The results are then compared to a set of benchmark values to determine the relative effectiveness of the SWP3. The draft general permit retains this requirement as a method for evaluating the facility's SWP3, but includes some modifications.

1. Monitoring Frequency

The current MSGP requires permittees to conduct semiannual benchmark monitoring throughout the permit term, and reported by March 31st of each year

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

following the monitoring year. The existing permit includes a waiver option, which had previously been available in the 2011 and 2016 MSGP as well as in each version of EPA's MSGP. Requiring benchmark sampling allows all facilities subject to benchmark monitoring to use the data collected to ascertain whether their BMPs are continuing to be effective, and also helps TCEQ determine whether longer term trends could be established.

For this proposed MSGP, the Executive Director is proposing to continue requiring benchmark monitoring semiannually during the four (4) permit years following the permit effective date, and the draft permit offers an opportunity for a facility operator to obtain a waiver from benchmark sampling. This waiver would be available for sampling years 3 and 4 if annual average sampling results for the first two (2) permit years are less than the benchmark levels. However, a waiver would not be available for any pollutant where the annual average result measured equal to or greater than the benchmark level.

2. Levels for Specific Pollutants

The levels and parameters for benchmarks in the current 2016 MSGP are based on results of benchmark values submitted to the TCEQ in calendar years 2011 to 2014. The benchmark levels proposed in the draft 2021 MSGP are based on analysis of benchmark results submitted to TCEQ during calendar years 2017 to 2019.

The results of the compiled data are described in Appendix A of this fact sheet. Based on the results, changes were made to the benchmark levels for two sectors for the following pollutants: Biochemical oxygen demand (BOD) and total suspended solids (TSS). The changes should provide permittees with benchmark levels that will be helpful in determining whether their BMPs are effectively reducing the level of pollutants in runoff associated with industrial activity, and how they compare with results of other dischargers.

Explanation of Revisions to Benchmark Monitoring Levels:

- a. Levels for the following pollutants were lowered from the 2016 MSGP levels based on the results of the benchmark monitoring in years 2017 through 2019:
 - Lowered TSS values from 100 mg/L to 50 mg/L for Sector U, Food and Kindred Products Facilities (SIC codes 2074 – 2079).
 - Lowered BOD₅ values from 20 mg/L to 15 mg/L for Sector T, Treatment Works (Activity code TW)
- b. There were no changes to the following pollutants, either because the original benchmark is appropriate to continue based on the fact that it is founded on data suggesting that the existing level is appropriate for stormwater runoff, or a sufficient number of sample points were not available to justify a change: total aluminum, total antimony, total arsenic, total beryllium, total cadmium, total copper, total cyanide total iron, total lead, total magnesium, total mercury, total nickel, nitrate-nitrite- nitrogen, total phosphorous, total selenium, total silver, total zinc, turbidity, oil and grease, and pH.

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

XI. Water Quality-Based Requirements

The Texas Surface Water Quality Standards (TSWQS) are located at 30 TAC Chapter 307, and state that “surface waters will not be toxic to man, or to terrestrial or aquatic life.” The methodology outlined in the *Procedures to Implement the Texas Surface Water Quality Standards*, RG-194 (June 2010) is designed to ensure compliance with 30 TAC Chapter 307. Specifically, the methodology is designed to ensure that no source will be allowed to discharge any wastewater which: (1) results in instream aquatic toxicity; (2) causes a violation of an applicable narrative or numerical state water quality standard; (3) results in the endangerment of a drinking water supply; or (4) results in aquatic bioaccumulation which threatens human health.

TPDES permits contain technology-based effluent limits reflecting the best controls available. Where these technology-based permit limits do not protect water quality or the designated uses, additional conditions are included in the TPDES permits, which may include discharge limitations. State narrative and numerical water quality standards are used in conjunction with EPA criteria and other toxicity data bases to determine the adequacy of technology-based permit limits and the need for additional water-quality based controls.

TPDES stormwater permits generally do not contain numeric water-quality-based effluent limits (WQBELs). As stated in 30 TAC §307.8(e), controls on the quality of permitted stormwater discharges are largely based on implementing BMPs or technology-based limits in combination with instream monitoring to assess standards attainment and to determine whether additional controls on stormwater are needed. Properly implemented BMPs should preclude adverse water quality impacts that would impair designated uses or violate water quality standards. It has been preliminarily determined that if permit requirements are properly implemented, no significant degradation is expected, and existing uses will be maintained and protected.

In certain situations, and to insure that water quality standards are being met, the TCEQ may require an individual stormwater permit of any discharger otherwise eligible for coverage under the MSGP. Examples include: a history of substantive noncompliance with the MSGP, requirements of a TMDL and Implementation Plan, or other site-specific considerations.

XII. Monitoring

Monitoring requirements are being continued from the existing permit based on TCEQ rules, TCEQ practice, EPA's existing NPDES MSGP, and best professional judgment (BPJ). Federal rules 40 CFR §122.44(i) require monitoring to be conducted for each pollutant limited in a permit to assure compliance with the permitted effluent limitations. The frequency of this monitoring may be established on a case-by-case basis, but must not be less than once per year.

The draft general permit continues the requirement to report annually all sampling results for discharges that are subject to categorical effluent limits at 40 CFR Subpart N. This is consistent with federal rules at 40 CFR §122.44(i)(3). In addition, the draft general permit would continue the requirement to report all *violations* of non-categorical effluent limits (i.e., state-based limits) once per year, which is consistent with 40 CFR §122.44(i)(4). Results of analyses would need to be submitted electronically using the online NetDMR system, and reported as described above.

XIII. Procedures for Final Decision

The MOA between the EPA and TCEQ provides that EPA has no more than 90 days to comment, object, or make recommendations to the draft general permit before it is published in the *Texas*

**FACT SHEET AND EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES General Permit TXR050000 - Multi Sector General Permit**

Register. According to 30 TAC Chapter 205, when the draft general permit is proposed, notice must be published, at a minimum, in at least one newspaper of statewide or regional circulation. The commission may also publish notice in additional newspapers of statewide or regional circulation. Mailed notice must also be provided to the following:

- A. the county judge of the county or counties in which the discharges under the general permit could be located;
- B. if applicable, state and federal agencies for which notice is required in 40 CFR §124.10(c);
- C. persons on a relevant mailing list kept under 30 TAC §39.407, relating to Mailing Lists; and
- D. any other person the Executive Director or chief clerk may elect to include.

After notice of the general permit is published in the *Texas Register* and the newspaper(s), the public will have 30 days to provide public comment on the proposed permit.

Any person, agency, or association may make a request for a public comment hearing on the proposed general permit to the Executive Director of the TCEQ before the end of the public comment period. A public comment hearing will be granted when the Executive Director or commission determines, on the basis of requests, that a significant degree of public interest in the draft general permit exists. A public comment hearing is intended for the taking of public comment, and is not a contested case proceeding under the Administrative Procedure Act. The Executive Director may call and conduct public meetings in response to public comment.

If the Executive Director calls a public meeting, the commission will give notice of the date, time, and place of the meeting, as required by commission rule. The Executive Director shall prepare a response to all significant public comments on the draft general permit raised during the public comment period. The Executive Director shall make the response available to the public. The general permit will then be filed with the commission to consider final authorization of the permit. The Executive Director's response to public comment shall be made available to the public and filed with the chief clerk at least ten (10) days before the commission acts on the general permit.

Once the draft permit is completed, it is sent to the Office of the Chief Clerk of the TCEQ. The notice is published in the *Texas Register*, and the draft permit is placed on the Commission's agenda. For additional information about this general permit, contact the Stormwater Team at (512) 239-4671.

XIV. Administrative Record

The following section is a list of the fact sheet citations to applicable statutory or regulatory provisions and appropriate supporting references.

A. 40 CFR Citations

TPDES General Permit TXR050000 - Multi Sector General Permit**

Appendix A - Benchmark Sampling

Methods Used to Evaluate Data

The benchmark monitoring information submitted by the permitted entities from 2016-2019 was compiled in a spreadsheet. The data were divided by industrial sectors, then further into individual SIC codes or industrial activity (AI) codes. If a benchmark result was reported as a zero or not detected (ND), the minimum analytical level (MAL) was entered as a result. If a benchmark result was reported as not sampled, not analyzed, or no qualifying rain event (NQRE), failed to sample was entered.

Data were analyzed by the type of pollutant for each group based on industry. Descriptive statistics were conducted for the following parameters: count, median, range, minimum and maximum values, standard error, standard deviation, kurtosis, skewness, quartiles, and outliers. Median was the parameter used for central tendency. The range or spread, skewness, kurtosis, quartiles, and outliers were examined to further understand data distribution. Data variability was described using standard error and standard deviation. Interquartile range was calculated and used for determining minor and major outliers (using a multiplier of 1.5 and 3 to the interquartile range, respectively). Outliers were not removed from the dataset. Additionally, these data were compared to the previous permit term data analysis to examine the consistency of data over time and to see if temporal trends in the data exist.

Proposed changes to the benchmarks were determined by comparing median pollutant values to the 2016 benchmarks. Median values with a deviation of 40% or greater were considered for benchmark changes (see Table 1). This 40% deviation is consistent with the standard used to determine noncompliance in permit effluent limitations.

Summary of Results

Overall, data were not distributed normally, data were variable with outliers present. The ranges of most dataset's data were large, often due to extreme values (outliers). Distribution lacked symmetry. Statistical tests comparing permit years were not conducted, although data were graphed at both pollutant and sector level for better data visualization. There were no data submitted for six pollutants (antimony, beryllium, manganese, nickel, oil and grease, and turbidity).

Of the 25 benchmark pollutants, changes were proposed for two (see Table 2).

- Biochemical Oxygen Demand (BOD) was proposed to be lowered from 20 to 15 mg/L for Sector T, Treatment Works. The proposed BOD limit was above both the median and mean values and well above the third quartile.
- Total Suspended Solids (TSS) was proposed to be lowered from 100 to 50 mg/L for Sector U, Food and Kindred Products Facilities for SIC Codes 2074-2079. This value was above the median value for this group.

A summary of data for each pollutant by industry sector and SIC code is provided in Table 3.
